EXPERIENCE

VerbaFlo AI – AI leasing agents for 50+ student-housing & build-to-rent operators **Aug 2025 – Present**
AI Engineer (SDE-1) Gurgaon, India

- **VerbaIQ analytics agent:** Designed and built its engine, which 20+ clients use to query their CRM, property and FAQ data in plain English: a planner running up to 8 parallel sub-agents (text-to-SQL, RAG) under role-based access.
- Cut LLM cost per follow-up question **73%** (\$0.139 → \$0.037) by building prompts around the cache; built its eval pipeline (LLM-as-judge, a 1,000-question production run, BI cross-checks) tracing wrong answers to tools, model or data.
- **LLM observability platform:** Built the AI team's in-house tracing, replay and eval platform (FastAPI, Next.js, Elasticsearch), replacing paid Opik; its SDK traces 4 production services at 350K+ spans a day for **17 engineers**.
- Shipped its git-bisect tool that pinpoints the prompt change behind a regression, a playground that replays production LLM calls on models from 14 providers, and an MCP server for coding agents.
- **Leasing agent platform:** Put 6 LLM providers behind one LiteLLM layer, so model swaps and failover are config changes, and added schema-validated outputs to 1,000+ prompt templates, serving **~50K LLM calls a day**.
- **Data pipeline:** Designed and built a MongoDB → ClickHouse sync (resumable change streams, auto schema mapping, drift repair) that moved analytics off the production database into a 64M-row warehouse at **under 5s lag**.
- **Conversation simulator:** Built its synthetic-user engine (Electron, Puppeteer, Claude tool calling): AI personas replay real leads against the live agent on 8 channels (web, voice, SMS, WhatsApp, email, Instagram, Facebook, WeChat).
- **Ticket debugging:** Built an MCP server that lets coding agents (Claude Code, Cursor, Codex) pull a ticket's conversation, records and traces, and run checks and tests, root-causing **95% of 200+** benchmarked tickets.
- **Leadership:** Mentored 4 interns; coordinated VerbaIQ's production launch across backend, frontend, QA, security and DevOps owners; set up the shared workspace and docs that let the team's coding agents work across 20 repos.

PrudentBit – encrypted file storage & sharing **Aug 2023 – Aug 2025**
Front-End Engineer (internship, converted to full-time) Noida, India (hybrid)

- First front-end hire; built [ImmuneFiles](#), ImmuneVault and [ImmuneShare](#) (end-to-end encrypted file storage, vaulting and sharing) from scratch, plus their Microsoft Teams, Outlook and Gmail apps.
- Halved ImmuneFiles' load times with a Next.js 14 migration; built a real-time admin console with 15+ live graphs.

PROJECTS

W.A.T.T.S., On-Device Personal AI Assistant | *Swift, SwiftUI, MLX, SQLCipher, sqlite-vec*
– macOS assistant running a 30B mixture-of-experts vision-language model fully on-device (Qwen3-VL, MLX), with ~40 tools, voice, dictation, encrypted hybrid-search memory and approval gates against prompt injection.
– Built via a self-designed builder/blind-critic agent loop with test gates and human review of security changes.

AI Portfolio Assistant | *Next.js, OpenAI, Groq, Transformers.js* [Live](#) [GitHub](#)
– Recruiter-facing chat that answers in first person via RAG over a 296-chunk career corpus, with a 3-model OpenAI/Groq fallback chain, JD uploads for tailored pitches and a 51-question retrieval regression suite.

Live Jinja Renderer | *JavaScript, VS Code API, Pyodide (WASM)* [Marketplace](#) [GitHub](#)
– VS Code extension rendering Python Jinja2 live via WebAssembly, with IntelliSense and AI test data; **15K+ installs**.

Occulta | *Next.js 16, Auth.js, Prisma, Turso, Gemini* [Live](#)
– Cicada 3301-style browser puzzle hunt: 40 levels across 4 games built on ciphers, audio and image steganography and interactive instruments, with server-side progression so no locked answer ever reaches the page.

Systems & Graphics | *Metal, Three.js, WebGL, Web Workers* [GitHub](#)
– 500K-body Barnes-Hut gravity simulation on Metal GPU (~23 steps/s, M5 Pro) and a Three.js [voxel engine](#).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Swift, SQL

AI / LLM: Agents & tool calling, multi-agent orchestration, RAG, text-to-SQL, evals & LLM-as-judge, prompt caching, MCP, LangChain/LangGraph, LiteLLM, Pydantic, PyTorch, vLLM, MLX, Anthropic/OpenAI/Gemini APIs

Data & Infra: ClickHouse, MongoDB, PostgreSQL, Elasticsearch, Milvus, Redis, Celery, Docker, Kubernetes, AWS

Frameworks: FastAPI, React, Next.js, Node.js, Electron, Puppeteer, SwiftUI, Three.js

EDUCATION

Sushant University **Sep 2021 – May 2025**
B.Tech in Computer Science (Specialization in AI/ML) Gurgaon, India
