EXPERIENCE

- VerbaFlo AI** – *AI leasing agents for 50+ student-housing & build-to-rent operators* **Aug 2025 – Present**
Gurgaon, India
AI Engineer (SDE-1)
- **VerbaIQ analytics agent:** Designed and built the engine that lets **20+ clients** ask plain-English questions of their CRM, property and FAQ data and get back answers, charts and dashboard tiles.
 - Architected it as a self-exploring agent on an in-house harness: it loops through planning, querying and checking until it reaches an answer, spawning parallel workers only when a question needs them.
 - Assembled its **2.5M+ token** retrieval knowledge base from scraped codebases, databases and reports, alongside tenant-scoped text-to-SQL on ClickHouse and PostgreSQL.
 - **LLM observability platform:** Built the AI team's in-house tracing and replay platform (FastAPI, Next.js, Elasticsearch), replacing paid Opik; **17 engineers** use it to debug 350K+ spans a day.
 - **Data pipeline:** Designed and built a real-time MongoDB → ClickHouse sync that moved analytics off the production database into a 64M-row warehouse at **under 5s lag**.
 - **Conversation simulator:** Built its synthetic-user engine, where AI personas replay real leads against the live agent on 8 channels to re-test bug reports.
 - **Ticket debugging:** Built an MCP server that lets coding agents investigate a ticket's conversation and traces, root-causing **95% of 200+** benchmarked tickets.
 - **Leadership:** Mentored 4 interns and coordinated VerbaIQ's production launch across 5 teams.

- PrudentBit** – *encrypted file storage & sharing* **Aug 2023 – Aug 2025**
Noida, India (hybrid)
Front-End Engineer (internship, converted to full-time)
- First front-end hire; built the front-ends of [ImmuneFiles](#), ImmuneVault and [ImmuneShare](#) (end-to-end encrypted storage, vaulting and sharing) from scratch, plus Microsoft Teams, Outlook and Gmail apps.
 - Halved ImmuneFiles' load times with a Next.js 14 migration and built a real-time admin console.

PROJECTS

- W.A.T.T.S., On-Device Personal AI Assistant** | *Swift, SwiftUI, MLX, SQLCipher, sqlite-vec*
- macOS assistant running a 30B mixture-of-experts vision-language model fully on-device (MLX), with ~40 tools, voice, encrypted hybrid-search memory and prompt-injection approval gates.
 - Built with a self-designed builder/blind-critic coding-agent loop and human review of security changes.
- AI Portfolio Assistant** | *Next.js, OpenAI, Groq, Transformers.js* [Live](#) [GitHub](#)
- Recruiter-facing chat that answers in first person via RAG over a 296-chunk career corpus, with a 3-model OpenAI/Groq fallback chain and JD uploads for tailored pitches.
- Live Jinja Renderer** | *JavaScript, VS Code API, Pyodide (WASM)* [Marketplace](#) [GitHub](#)
- VS Code extension that renders Python Jinja2 live via WebAssembly; **15K+ installs**.
- Systems & Graphics** | *Metal, Three.js, WebGL, Web Workers* [GitHub](#)
- 500K-body Barnes-Hut gravity simulation on Metal GPU (~23 steps/s, M5 Pro) and a Three.js [voxel engine](#).

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Swift, SQL
AI / LLM: Agents & tool calling, multi-agent orchestration, RAG, text-to-SQL, evals & LLM-as-judge, prompt caching, MCP, LangChain/LangGraph, LiteLLM, PyTorch, vLLM, MLX, OpenAI/Anthropic APIs
Data & Infra: ClickHouse, MongoDB, PostgreSQL, Elasticsearch, Milvus, Redis, Celery, Docker, Kubernetes, AWS
Frameworks: FastAPI, React, Next.js, Node.js, Electron, Puppeteer, SwiftUI, Three.js

EDUCATION

Sushant University **Sep 2021 – May 2025**
Gurgaon, India
B.Tech in Computer Science (Specialization in AI/ML)
